Inside View
#10 Diagonal Seam Layout
Die #102
1up Sheet: 9-3/4 x 16-3/4
Grain Short

Blends - We can not guarantee perfect blends. Slight variation occurs naturally in the die cutting & folding process. For best results, allow 1/8" tolerance. The quality of the printed stock greatly affects the process, with poorer stock yielding more bounce & wrinkle and producing varying degrees of difficulty. Variance can be minimized by using our Inside Die system on larger orders (25,000 +) or sending in stock that has been flattened, cut and scored. Grain direction is critical for Inside Die.

Knockouts - Please keep knockout areas free of ink and varnishes, as they may cause glue to fail. Varnishing the sheet can be helpful in protecting bare ink coverage from marking during converting.

Guide and Gripper - Please keep knockout areas free of ink and varnishes, as they may cause glue to fail. Varnishing the sheet can be helpful in protecting bare ink coverage from marking during converting.

Trim - Exact allowance for trim is critical. Do not provide Die Marks. Exact allowance for trim before die cutting. Position layout at one edge of press sheet leaving 1/2" top and bottom for gripper and color bar dimensions to the sheet. Vanishing the sheet can be helpful in protecting bare ink coverage from marking during converting.

Inside Tints - Please call for special layout.
