Bleeds - We can not guarantee perfect bleeds. Slight variation occurs naturally in the die cutting & loading process. For best results, allow 1/8" tolerance. The quality of the printed stock directly affects the process, with press bounce and misregister being the most common causes. Please use a minimum of 1/8" bleed on all sides of the artwork for Profile Dies. Larger orders (25,000+) or sending in stock that has been letterpress die cut and scored. Grain direction is critical for Profile Dies.

Knockouts - Please keep knockout areas free of inks and varnishes, as they may cause glue to fail. Varnishing the knockout areas will cause the glue to fail.

Guide and Gripper - Please mark and furnish a full bleed please add gripper and color bar dimensions to the sheet size. Print Edge Marks on sheet. Do not print Die Marks.

Trim - Exact adherence to die layout reduces the need for trim before die cutting. Position layout at one edge of press sheet using 1 up sheet size as guide, do not center layouts on press sheet. Critical designs may still require trim to insure folding balances.

Inside Trims - Please call for special layout.
