#10 Diagonal Seam Layout
Die #328
1up Sheet: 9-3/4 x 16-3/4
Grain Short
Bleeds - We can not guarantee perfect bleeds. Slight variation occurs naturally in the die cutting & folding process. For best results, allow 1/8" clearance. The quality of the printed stock directly affects the process. Variance can be minimized by using our Profile Die system on paper stocks 80 lb. text or heavier (250 gsm or heavier). Variance can be minimized by using our Profile Die system on paper stocks 80 lb. text or heavier (250 gsm or heavier). Grain direction is critical for Profile Dies.
Knockouts - Please keep knockout areas free of inks and varnishes as they may cause glue to fail. Varnishing the sheet can be helpful in protecting heavy ink coverage from marking during converting.
Guide and Gripper - Please mark and if running a full flood please add gripper and color bar dimensions to the sheet size. Print Fold Marks on sheet. Do not print Die Marks.
Trim - Exact adherence to die layout reduces the need for trim before die cutting. Position layout at the edge of press sheet using 1 up sheet size as guide, do not center layouts on press sheet. Critical designs may still require trim to ensure folding tolerances.
Inside Trim - Please call for special layout.
