Bleed - We can't guarantee perfect bleeds. Slight variance occurs naturally in the die cutting & folding process. For best results allow for tolerance. The quality of the printed stock directly affects the process, with profiles die grain on, larger tolerances. (25,000) or of a negative stock. Variance can be minimized by using our scored. Grain direction is critical for folding & dies.

Knockouts - Please keep knockout areas free of ink and varnishes, as they may cause glue to fail during the sheet can be helpful in protecting heavy ink coverage from marking during converting.

Trim - Exact adherence to die layout reduces the need for trim before die cutting. Position layout on the edge of press sheet using 1up sheet size as guide. Do not allow for bleed.

Inside Trims - Please call for special layout.
